

## Autumn Centerpiece

### You will need:

Candle holder  
Glue gun  
Assorted artificial leaves and stems  
Faux pumpkin  
Floral Styrofoam  
Wire cutters

### Instructions:

1. Hot glue the floral Styrofoam to the candle holder. If the foam does not fit perfectly, use a serrated knife to cut it down to the correct size. You can use whatever thickness of Styrofoam you like — we used a piece about 3 inches thick.
2. Hot glue the bottom of the pumpkin to the top of the Styrofoam.
3. Using wire cutters, remove individual stems and insert them into the Styrofoam below the pumpkin. Cover as much of the Styrofoam as possible.
4. Use hot glue to add leaves to any areas where the Styrofoam is visible.

EveryStep Giving Tree has a large selection of candle holders like the one we used for our project! The store also has many floral stems and foliage to choose from.
